

Company & Manufacturing Profile

Ningbo Xinqiu Tourism Products Co., Ltd.

Prepared for: Wanderfalke UG & Co. KG — TUNNEL Tent Programme 2027

Dear Andrej,

Thank you for the clear questions. Below is a direct answer to each of them. Every figure here is our actual operating number, and where our structure needs explaining rather than a single number, we explain it — including one point about our BSCI report that we would rather raise ourselves than have you discover later.

Company basics

- **Company:** Ningbo Xinqiu Tourism Products Co., Ltd.
- **Brands:** XINQIU TENT / wind valley — www.xinqiutent.com
- **Established:** 2006 — 20 years in tent manufacturing, OEM/ODM only
- **Headquarters & own plant:** Ningbo, Zhejiang, China — approx. 30 minutes from the port
- **Social compliance:** BSCI audited (scope: Ningbo own plant — see section 1)

1. Team size — factory and administration

Our manufacturing runs on two sites, and we want to be precise about which people sit where.

Ningbo — our own plant (covered by our BSCI report): 36 people

Function	Headcount
Production line staff	24
Management	4
Sales & merchandising	3
Design	1
Technical / pattern making	2
Total	36

Anhui — two partner factories: approx. 200 sewing operators

These two factories are not owned by us and we hold no equity in them. The relationship is structural rather than casual: **we supply the production equipment, and in return our orders take scheduling priority on those lines.** They are not ad-hoc subcontractors we shop around for each season.

Please note: our BSCI report covers the Ningbo own plant only. The Anhui partner factories are not within its scope. We are telling you this upfront because you will otherwise compare 36 employees against our stated annual output and reasonably conclude the numbers do not add up. They do — the volume sits in Anhui.

2. Annual production capacity for tents

Annual tent output	approx. 200,000 units
Peak monthly shipment	up to 20,000 units
Production lines	1 in Ningbo + 15 in Anhui = 16 total
Industrial sewing machines	approx. 300 units

The single Ningbo line is deliberate, not a limitation. It runs sampling, small runs and high-end custom work, where speed of iteration matters more than volume. The 15 Anhui lines carry mass production. For your TUNNEL programme this means development rounds stay fast at head office, and the production order is delivered at scale.

3. Size of the production facilities

- **Ningbo headquarters** — **3,300 m²**, moved into this new site in 2026. Positioned as our sampling, showroom and high-end customisation base.
- **Anhui partner factories** — **15,000 m²**, the volume production base.

4. European and international brands we manufacture for

We work exclusively as an OEM/ODM manufacturer. We do not sell a competing retail brand into our customers' markets.

Rather than a list of names, here is where our output actually goes:

Destination	Share of exports
United States	30%
Spain	20%
Austria	15%
Other EU countries	35%

That means roughly **70% of our output ships into Europe** — EU packaging requirements, EU-market retail expectations and European seasonal timing are routine for us, not a learning curve.

5. Named references — and what we can offer instead

Our customer relationships are covered by non-disclosure agreements, so we are not in a position to name them. We would rather keep those agreements than impress you with a name list — you would expect the same protection for Wanderfalke, and you will have it.

What we can put in front of you instead:

- **Verified third-party audits:** our **BSCI report** (Ningbo plant) and our **SGS factory audit report** conducted through Alibaba.com. Both can be sent to you directly.
- **In-house testing:** a **hydrostatic head tester** and a **dedicated tent waterproof test chamber**, where a pitched tent is tested under simulated rainfall. We can test your TUNNEL sample in front of you on a live video call.
- **Lead times we commit to:** sampling **7–15 days**; mass production **approx. 45 days**, varying with peak and off-peak season.

- **Comparable work, shown physically:** during a factory visit or video walk-through we can show tunnel-construction tents currently on the line — seam taping, pole sleeve stitching, pitched inspection — without disclosing whose they are.

6. Photos and video of the production facilities — our proposal

We would rather show you the plants live than send a folder of selected photos.

1. **Live video walk-through — both sites.** A scheduled call on WhatsApp or WeChat, walking the Ningbo plant and, separately, the **Anhui production lines**. You pick the route and can ask us to stop anywhere. Since Anhui is where your volume would actually be built, we think you should see it rather than take our word for it. Suggested slots: **08:00–10:00 CET**, which is mid-afternoon our time and works well for both sides.
2. **Targeted footage on request.** Tell us which processes matter for your TUNNEL construction — seam sealing, pole sleeve stitching, pitched inspection, the waterproof test chamber — and we will film those stations specifically, not a generic promotional clip.
3. **New facility footage.** An overview video and photo set of the Ningbo site we moved into in 2026, plus the Anhui production floor.
4. **Visit in person.** You are welcome at any time. We are approx. **3.5 hours by car from Shanghai Pudong Airport**, and about 30 minutes from the port.

We understand you are evaluating a long-term manufacturing partner, not placing a one-off order. We are comfortable being evaluated on that basis. If anything above raises a further question — particularly on the Ningbo / Anhui structure — please ask it directly.

Best regards,

Ray
